X32-4X3 Craft Notes #02

Malfunctions

The X32-4X3 has a comprehensive malfunction detection system, which will alert the pilot to any issues that might arise.

By following the instructions below, these malfunctions can easily be corrected from within the cockpit, and a safe journey assured.

Safe Operating Limits

There are 18 known possible faults for the X32-4X3. The craft cannot survive more than 5 of these faults simultaneously. The total current number of faults is shown on the right hand side of the craft's status display.

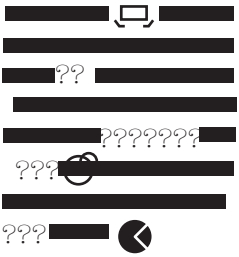

It is vital that pilots keep the number of simultaneous faults below 6. If the pilot does not succeed in this, [redacted] craft, causing its destruction.

Malfunctions and their Solutions

The tables below detail the craft's known possible faults, and their solutions.

Signal	Problem	Solution
	Auxiliary Engine Failure	Turn on In  , set  high Press  and confirm The warning light should disappear.
	Engine Stalled	Turn  off Set  to  Then press  and confirm. The warning light should disappear.

Signal	Problem	Solution
	Landing Light failure	Turn  on Turn  off Press  and confirm The warning light should disappear.
	Main Power Failing	Set all  to low Set  to  Press  and confirm The warning light should disappear.
	Missile Placement Connundrum	In  , set  to medium Press  and confirm The warning light should disappear.
	Incoming Asteroid. Take Evasive Action!	Set  to  Turn  off Turn  on Press  and confirm The warning light should disappear.

Signal	Problem	Solution
	Asteroid Detection Malfunction	Set  to In  , set  to medium In  , set  to medium Press  and confirm The warning light should disappear.
	Non-trivial Addition Error	In  , set  to low Turn on Press  and confirm The warning light should disappear.
	Landing Sequence Malfunction	 Sequence Unkown
	EMP Detector Short	Press  and confirm The warning light should disappear.

Signal	Problem	Solution
	Retro-Thrusters Corroded	Turn  off Press  and confirm The warning light should disappear.
	Trivial Addition Error	In  , set  to low Press  and confirm The warning light should disappear.
	Heating Systems Frozen	Set  to In  , set to low Press and confirm The warning light should disappear.
	Parallel Alignment Disfunction	Turn  on Turn  on In  , set  to high Press  and confirm The warning light should disappear.

Signal	Problem	Solution
	Auto-Pilot Rebelling	Set  to  In  , set  to high Press  and confirm The warning light should disappear.
	Rear Cabin Depressurising	Press  and confirm The warning light should disappear.
	Main Fuel Tank Empty. Change to reserve tank.	Turn  off In  , set  to low Press  and confirm The warning light should disappear.
	Wing Balance sub-optimal	Set  to  Press  and confirm The warning light should disappear.
